

Introducing iOS Shaper

Arvieux, France - June 16th, 2017

K-Devices announces the release of **Shaper**, a new **iOS app**.

Shaper is a multi-FX audio processor composed by four modules that user can reorder as he wants. Shaper works as **stand alone**, **Inter-App** audio, and is also an **Audio Unit** extension; it just fits any iOS music-making workflow!

Available modules: a **glitch gate**, a **waveshaper** with 5 brand new inspiring functions (muffin, multistress, cracker, s&m, bits & samps), a multi-mode **transform** section (wave-clipper, wave-wrapper, and wave-folder), a **resonator**/short delay, that can act as a **comb filter** too.

User chooses how to feed it and how to mix it with a **gain** and a **dry/wet** section.

Two **oscilloscopes** display audio signals before and after processing.

Changing the order of modules in the chain, makes of Shaper an incredibly versatile sounds processor!
